

1.Description

The UMW 78LXX series of fixed voltage monolithic integrated circuit voltage regulators are suitable for applications that required supply up to 100mA.

2.Features

- Maximum output current of 100mA
- Output voltage of 3.3V,5V,6V,8V,9V,10V, 12V, 15V, 18V and 24V
- Thermal overload protection
- Short circuit current limiting

Note 1: The Maximum steady state usable output current and input voltage are very dependent on the heating sinking and/or lead temperature length of the package. The data above represent pulse test conditions with junction temperatures as indicated at the initiation of test.

Note 2: Power dissipation $< 0.75W$.

Note 3: Output voltage of 78LXXA

7. Typical Application

Note 1: To specify an output voltage, substitute voltage value for "XX".

Note 2: Bypass capacitors are recommended for optimum stability and transient response and should be located as close as possible to the regulators
